

## **BlockFone / Cellular Jammer (Cellular Communications Control)**

Blockfone is a range of products designed to block mobile phones and prevent all cellular transmissions, without interfering with other communication systems.

When activated Blockfone produces signals that jam cellular devices by preventing them from sending or receiving. All the incoming calls are thus directed to the subscribers voice mail.

With adjustable frequencies and power levels Blockfone can be rolled out and set up in any location where the use of mobile phones is prohibited or undesirable.

BP27 designed for indoor applications approx coverage 10-15m.

BP80 designed for outdoor applications aprox coverage 30-40m.

BP120 designed for outdoor applications approx coverage 100-150m.

### **The BlockFone provides the following features**

- All cellular standards available.
- Single, dual, tri and quad-band systems.
- Digital power control (61 power levels).
- Remote Control (optional) .
- Connection to Detectphone (optional).
- Mains or Battery operation (optional).
- Can be supplied in a waterproof case.
- Typical applications include Prisons, Embassies, VIP protection and EOD units.

**The use of BlockFone is governed by law. These products are not for sale or use in the UK.**
